

Smart Water Fund

Applications for funding from the
Smart Water Fund Open Innovation Stream
will open on 3 March 2011

Water Innovation Funding

The Smart Water Fund is pleased to launch its first funding offer under its new strategic framework and business model.

Funding applications, under the Open Innovation Stream, are invited for projects that invest in applied research and innovation that deliver knowledge, products or solutions that contribute towards sustainable urban water management. Projects being proposed for funding must have a demonstrated need and benefit to the Victorian water utilities and the customers they serve. Applications with wider national or international relevance are also encouraged.

Organisations, researchers, innovators and individuals are invited to apply.

The Smart Water Fund is the Victorian water industry's flagship centre for funding and

managing collaborative research in the water sector. Established in 2002, the Smart Water Fund is an initiative of Victoria's water utilities and the Victorian Government.

Generally, the Fund will consider applications in the range of \$100,000 - \$500,000.

**Applications open on 3 March 2011.
Applications close on 8 April 2011.**
